

Electronic Heat Gun that's built to last with LCD display for precise heat application.

## Introduction

This professionally-rated heat gun comes with a hard wearing body, stay-cool handle and modern electronic heat dial and separate air flow switch.

The LCD screen allows you to have specific heat control with a wide adjustable temperature range 50°C to 650°C; making it far more precise, safe and efficient than a blow torch. The electronic display has a handy function that remembers the last heat setting you used it for, great for those large or on site jobs.

The heat gun comes with six interchangeable attachments to suit a variety of projects including concentrator nozzle for bending plastic, a detailed hook scraper and flat scraper for effective removal of paint, glass protection nozzle, deflector nozzle and a handy carry case for storage.

Great for painting preparation, it blisters old paint making it far easier to scrape and remove. It can help loosen and remove damaged vinyl tiles without affecting the surrounding ones. The LCD heat gun can also be used for defrosting, drying damp/wet surfaces, softening adhesive, soldering, removing window glazing filler and bending pipes.

The Ultimate LCD heat gun gets the job done effortlessly and is the essential tool for any professional toolbox.

## Features

- 2000W element
- 2M cable
- Lcd electronic display
- Temperature settings: 50°C to 650°C
- Historical heat setting memory
- Hook & flat scraper
- Hook & concentrator nozzle
- Deflector & glass protection nozzle
- Carry case

## Benefits

- Fast and consistent flameless heat
- Quick and efficient
- Controlled temperature dial for correct heat application for designated projects
- Diverse use for multiple tasks and surfaces
- Comfortable design for frequent use
- Lightweight and portable
