

The perfect homeowner system designed for medium to large spray painting projects.

Introduction

The Ultimate SprayStation® comes with a unique spray pack to tackle those large spraying tasks like garden fencing, decking and walls. The spray pack holds up to 5 litres of paint for uninterrupted spraying without having to frequently refill the paint container. The large round lid on the front of the spray pack is fast to unscrew for a quick re-fill. With a 4 metre hose it provides ease of movement for both interior and exterior projects. This system can do fine and detailed work, but it really comes into its own when tackling larger tasks.

The spray gun is designed for any skill level from the first time user to DIY enthusiast. The gun has three different spray patterns to suit your specific project; round is great for fine and detailed work like furniture or radiators and horizontal or vertical options are available for larger areas such as walls and fences.

On the back of the gun there is a quick to adjust paint flow dial, which means you can be in constant control and alter how fast you are spraying as you go, providing maximum control with minimal overspray.

This gun can spray most paints and liquids and uses far less material than a brush or roller. The powerful 550 watt motor allows for fast and easy paint application with smooth professional results.
