

A semi-professional system for precision painting in and around the home and workshop.

Introduction

The SprayStation[®] HV5500 is a semi-professional unit designed for light contractor jobs, wood workers, serious DIY and automotive enthusiasts.

The lightweight and compact size makes it ideal for the workshop, home or job site use for interior and exterior trim, doors, walls, fences, shutters and more. It is much faster and uses far less material than a paint brush or roller.

It comes with a professional 1 litre Non-stick PTFE coated paint container and metal gun with a 2mm stainless steel needle so it is impeccably tough and can handle frequent use.

This non-corrosive gun can spray both oil-based and water-based paints and comes with a viscosity cup to ensure the material is the correct consistency for spraying.

This paint sprayer offers power and precision, the metal gun comes with a fast push and click system that allows you to quickly change the spray pattern to vertical, horizontal or round and a flow control nozzle to change the paint flow for each specific task. The result is a remarkable finish, with maximum control and minimal overspray – drips and mess will be a thing of the past.

The paint sprayer has a carry handle and 4m hose which allows you to move around and spray freely for any project. It also comes with a cleaning kit and spanner so it is quick and easy to maintain your unit.

Features

- Robust metal gun
- 2mm stainless steel needle
- 1 Litre non-stick ptfе coated paint container
- 650W motor
- 4 Metre hose
- Adjustable fluid control (*up to 690g/min)
